

Vibrating Sound Driver

LVS3

These sleek vibrating devices turn any hard, flat surface into a speaker for your laptop, mp3 player or cell phone. Featuring a new level of audio technology, they don't generate acoustic sound themselves. Instead, they drive powerful sound waves into whatever surface they're placed on, causing that surface to literally become a speaker. On glass, wood, or plastic, any material that can vibrate will generate music in 360°. Moreover, unlike regular speakers, the sound waves propagate in the air in a pattern that provides a more even distribution.

**USB
Power**

**AC power
adaptor
included**

**3.5mm
connector**
