

Wall Plates IR

Custom

Omage AT150 and **AT200** volume controls with auto-transformers and adjustable impedance for multi-room applications are designed to handle high-power loads and deliver clean sound. Detachable wire connection terminals facilitate and speed up installation.

The **IRCV70-W** volume control with an infrared pick-up for full-system, whole-house control is available in a decora slider or rotary style. Each simply hooks up to a **RPT01**, IR control box that will send your remote control information from any room to your home stereo system.

Furthermore, the stand alone IR pick-up, **IRC-01**, for remote extension only is available for rooms not requiring physical in-room volume controls. It connects through the **RPT02** to the **RPT01** to send remote control signals back to the main system. Extension links **SE1** and **DE1**, single and dual-head signal emitters are available separately and may be connected four at a time to a **RPT-01**.

IRSVC70-W
70 w RMS with infrared lens

IRVC70-W
70 w RMS with infrared lens

VC2050
25 w RMS stereo

AT200
75 w RMS stereo Impedance match

AT150
50 w RMS stereo impedance match

Wall plates available in White. Only the models AT150 and AT200 are available in White (add suffix 'W') and Ivory (add suffix 'I')
