

flat panel brackets - extendable ceiling bracket / ultra thin wall brackets

LCD BRACKETS

Sonora provides all types of wall and ceiling mounting solutions for Plasma and LCD installations. A low-profile wall flush mount is made easy and affordable with the VESA standard AM30 or the larger AM32. Likewise, the LC1-36 will make ceiling installation easy and ensure that your LCD panel will be safely mounted. For a professional look to any installation, use Sonora CM07 wire conduit (see page 49). Because conduits can be clipped together to cover any given distance, they make hiding unsightly wires quick and easy, with no mess to worry about.

LC1-36-N

ADJUSTABLE
CEILING
BRACKET

Maximum bearing capacity 44 ^{lbs}
VESA Standard spacing 50, 75, 100/200, 200 mm

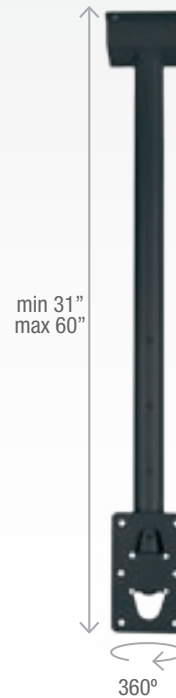

XC1-80 EXTENTION BRACKETS

For Plasma/LCD installations requiring extension from the wall, the XW3-80 provides up to a 24" draw and fully variable, three pivot point, movement. While in the case of a ceiling mount, the XC1-80 is the perfect solution to easily and securely mount your equipment in place.

The XW3-80 and XC1-80 work in conjunction with all models of the PW and PWT series. It is simply a matter of choosing the most appropriate model and size for the job at hand.
